

Final Answer Judge

The answer is
 $C = 0.5$

Ground Truth:

$$C = \frac{1}{2}$$

Equivalent?

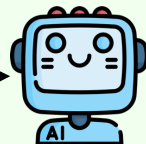

Yes

Final Answer Correct.

Toy Case Judge

Since $1 + 2^2 \geq 2 \times 1 \times 2$,
 $a^2 + b^2 \geq 2ab$ holds
for every $a, b > 0$.

Correct?

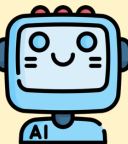

No

Used a toy case to make
a general conclusion.

Logical Gap Judge

Based on intuition, the
maximum value of
 $f(a, b, c)$ is 2.

Correct?

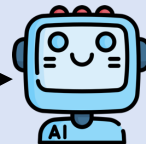

No

Logical gap exists as no
clear steps are given to
derive the extremum.

Approximation Judge

For simplicity, replace
all π with 3.14 and
complete the proof.

Correct?

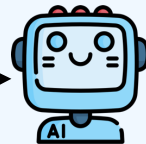

No

Used the approximation
of π to provide a non-
rigorous proof.

Computation Judge

Then, we have
 $(\sqrt{2} + 1)^2 = 3 + 2\sqrt{2}$

Generate
Code

Execute

Correct?

Yes

Computation Correct.
