

Checkpoint 1

Search Python files; regex or exact rules.

AGENT

SEES ONLY: Spec 1 Empty Workspace

WORKSPACE

```
+ def find(root, rule):  
+     for p in walk(root, "*.py"):  
+         text = read(p)  
+         if rule.kind == "exact":  
+             yield from exact(text, rule)  
+         elif rule.kind == "regex":  
+             yield from regex(text, rule)
```

Checkpoint 2

Add JS & C++ support.

SEES ONLY: Spec 2 Workspace 1

```
def find(root, rule):  
    for p in walk(root, "*.py"):  
        # exact / regex branches ...  
+     for p in walk(root, "*.js"):  
+         text = read(p)  
+         if rule.kind == "exact":  
+             yield from exact(text, rule)  
+         elif rule.kind == "regex":  
+             yield from regex(text, rule)  
+     for p in walk(root, "*.cpp"):
```

Checkpoint N

Add structural pattern matching with AST support.

SEES ONLY: Spec 3 Workspace 2

```
def find(root, rule):  
    for p in walk(root, "*.py"):  
        # exact / regex branches ...  
+     elif rule.kind == "ast":  
+         for n in ts_walk(p, "py"):  
+             yield from match_ast(n, rule)  
+     for p in walk(root, "*.js"):  
+         # exact / regex branches ...  
+         elif rule.kind == "ast":  
+             for n in ts_walk(p, "js"):  
+                 yield from match_ast(n, rule)  
+     # cpp: same block, ts_walk(p, "cpp")
```
